Rad Health/ Land Survey
(Storey Property)

Wallace L. Storey
Attorney-at-Law
Post Office Box 796
Bartow, Florida 33830

Dear Mr. Storey:

Attached you will find a field report on the property which you requested to be surveyed. As you will note due to the inaccessibility, only a small portion of the tract was surveyed. The average value found was approximately 17 micro R/hr which exceeds the 10 micro R/hr recommended standard as set forth by Environmental Protection Agency for development of residential dwellings. Since the suggested use of the land is for school buildings rather than residential structures, the recommended standards would not necessarily apply.

This agency feels that with proper precautions and site selection on the tract, structures for this purpose could be built and utilized with no appreciable health effect. Further, we will be glad to do additional studies of this property and cooperate with anyone desiring to utilize it for these purposes.

Sincerely,

Donald R. Guthrie
Sanitary Engineer
